## List of figures

---

|                                                        |    |
|--------------------------------------------------------|----|
| Figure 1                                               |    |
| Top view of module cabling troughs .....               | 6  |
| Figure 2                                               |    |
| Front view of module cabling troughs .....             | 6  |
| Figure 3                                               |    |
| Top view of front to I/O connector panel routing ..... | 7  |
| Figure 4                                               |    |
| 90° cable connector .....                              | 8  |
| Figure 5                                               |    |
| 180° cable connector .....                             | 8  |
| Figure 6                                               |    |
| Minimum size option 21 and 21A .....                   | 11 |
| Figure 7                                               |    |
| Expanded option 21 and 21E .....                       | 12 |
| Figure 8                                               |    |
| Three-tier expanded option 21 and 21E .....            | 12 |
| Figure 9                                               |    |
| Option 51 configuration .....                          | 13 |
| Figure 10                                              |    |
| Three-tier option 51 configuration .....               | 13 |
| Figure 11                                              |    |
| Option 51 or 51C with expanded IPE .....               | 14 |
| Figure 12                                              |    |
| Three-tier option 51 or 51C expansion .....            | 14 |

|                                                                 |    |
|-----------------------------------------------------------------|----|
| Figure 13                                                       |    |
| Option 61 with expanded IPE .....                               | 15 |
| Figure 14                                                       |    |
| Three-tier option 61 expansion .....                            | 16 |
| Figure 15                                                       |    |
| Option 61 or 61C migration to option 81C .....                  | 16 |
| Figure 16                                                       |    |
| Three-tier option 61 or 61C migration to option 81C .....       | 17 |
| Figure 17                                                       |    |
| Option 71 allowing space for network expansion .....            | 18 |
| Figure 18                                                       |    |
| Three-tier option 71 allowing space for network expansion ..... | 19 |
| Figure 19                                                       |    |
| Five-group option 71 .....                                      | 19 |
| Figure 20                                                       |    |
| Three-tier five-group option 71 .....                           | 20 |
| Figure 21                                                       |    |
| Five-group option 71 alternate configuration .....              | 20 |
| Figure 22                                                       |    |
| Three-tier five-group option 71 alternate configuration .....   | 21 |
| Figure 23                                                       |    |
| Option 81 basic configuration .....                             | 22 |
| Figure 24                                                       |    |
| Option 81 five-group configuration .....                        | 23 |
| Figure 25                                                       |    |
| Option 81C basic configuration .....                            | 24 |
| Figure 26                                                       |    |
| Option 81C five-group configuration .....                       | 25 |
| Figure 27                                                       |    |
| Universal I/O panels .....                                      | 29 |
| Figure 28                                                       |    |
| IPE I/O connector panels .....                                  | 32 |

---

|                                                                       |    |
|-----------------------------------------------------------------------|----|
| Figure 29                                                             |    |
| PE I/O panels .....                                                   | 34 |
| Figure 30                                                             |    |
| RPE I/O panels .....                                                  | 35 |
| Figure 31                                                             |    |
| CE/PE module I/O panels .....                                         | 37 |
| Figure 32                                                             |    |
| Meridian Mail module I/O panels .....                                 | 39 |
| Figure 33                                                             |    |
| Meridian Link I/O panel .....                                         | 41 |
| Figure 34                                                             |    |
| Simplified view of network to junctor cabling for options 71 and 81 . | 45 |
| Figure 35                                                             |    |
| Simplified view of network to junctor cabling for option 81C .....    | 46 |
| Figure 36                                                             |    |
| Option 61 configuration .....                                         | 47 |
| Figure 37                                                             |    |
| Option 71 full group .....                                            | 48 |
| Figure 38                                                             |    |
| Option 81 basic configuration .....                                   | 49 |
| Figure 39                                                             |    |
| Option 81 multi-group configuration .....                             | 50 |
| Figure 40                                                             |    |
| Option 81C basic configuration .....                                  | 51 |
| Figure 41                                                             |    |
| Option 81C multi-group configuration .....                            | 52 |
| Figure 42                                                             |    |
| System monitor module to module cabling .....                         | 56 |
| Figure 43                                                             |    |
| System monitor to SDI cabling method .....                            | 57 |
| Figure 44                                                             |    |
| System monitor to XSDI cabling method .....                           | 58 |

|                                                                     |    |
|---------------------------------------------------------------------|----|
| Figure 45                                                           |    |
| System monitor inter-CPU cabling . . . . .                          | 58 |
| Figure 46                                                           |    |
| Module to module intercabinet cabling . . . . .                     | 60 |
| Figure 47                                                           |    |
| Cabinet to module intercabinet cabling . . . . .                    | 61 |
| Figure 48                                                           |    |
| ST to module intercabinet cabling . . . . .                         | 62 |
| Figure 49                                                           |    |
| System monitor to system monitor serial link cabling . . . . .      | 63 |
| Figure 50                                                           |    |
| Meridian Mail module cabling . . . . .                              | 66 |
| Figure 51                                                           |    |
| Side view of QSDI module cabling . . . . .                          | 67 |
| Figure 52                                                           |    |
| Option 21/21E SDI and XSDI cabling . . . . .                        | 68 |
| Figure 53                                                           |    |
| Option 81C upgraded from option 61, 61C (NT9D11), 71, or 81 . . . . | 70 |
| Figure 54                                                           |    |
| Option 81C upgraded from an SL-1 system . . . . .                   | 72 |
| Figure 55                                                           |    |
| Option 21E/51C upgraded from an SL-1 NT or RT system . . . . .      | 74 |
| Figure 56                                                           |    |
| Option 21E/51C upgraded from an SL-1 ST or RT system . . . . .      | 75 |
